

Help Customers Realize Digital Transformation Goals

New Capabilities Set Course for Customers to Successfully Modernize, Automate and Transform Their Datacenters

DELL EMC WORLD 2017, LAS VEGAS - May 9, 2017

News Summary:

- Dell EMC delivers major innovation wave to help businesses reinvent themselves for new digital era
- New technology innovations span all-flash storage, software-defined storage, hyper-converged infrastructure, hybrid cloud and data protection
- Complementary solutions, services and consumption models provide customers the best of enterprise technology, all in one place

Full Story:

Dell EMC announces a wave of new modern data center innovations, each serving a specific and meaningful role toward helping customers realize their goals for digital transformation.

Digital transformation will change fundamentally how every business in every industry is built and operated, and how it interfaces with customers. The unprecedented amounts of users, applications and data volumes will simply break traditional infrastructure. To succeed in this new digital world, companies will require an IT transformation. Today's new announcements from Dell EMC help customers along this path by basing their IT on a modern architecture as the foundation for a hybrid cloud. Today's announcements also make it easier for companies to buy from Dell EMC through the adoption of a cloud-like pricing model. Customers can scale up or scale down their environments, only paying for what they use at the component level, or at the data center level.

Companies behind the IT transformation curve are those that are held back by legacy infrastructures. As organizations look to digitally transform, IT maturity may be a deciding factor for determining which companies win. In fact, the new Enterprise Strategy Group (ESG) 2017 IT Transformation Maturity Curve study commissioned by Dell EMC shows that 85% of the most mature organizations believe they are in a "very strong" or "strong" position to compete and succeed in their market over the next few years contrasted with 43% of the least mature companies. However, making any progress in IT maturity drives agility, innovation and improved business outcomes.

"The digital transformation mega trend will only intensify, reinforcing the need to start the IT transformation journey now," said David Goulden, president, Dell EMC. "Dell EMC is the ideal partner to help customers take this first step. The creation of Dell EMC has rapidly accelerated our ability to develop and deliver technologies that will underpin the next wave of innovation and progress for our customers."

Announced today from Dell EMC World:

- Dell EMC Drives IT Transformation With the New 14th Generation of PowerEdge Servers
- New Dell EMC Hyper-Converged Infrastructure Advancements and Cloud-Like Consumption Model

Ease Adoption

- Dell EMC Software-Defined Storage Paves Way for Data Center Modernization
